

WOLVES AND WILD LANDS

“*Wolves and Wild Lands*” brings the compelling stories of wolves and their relationship with humans to museums and other institutions nationwide. For example, did you know that wolves once occupied every habitat in North America, from mid Mexico to the polar ice pack? Human encroachment has led to diminished territories and prey for most wolves, but much important work is being done to find a way towards co-existence between wolves and people.

The exhibit is comprised of six preserved taxidermy specimens, each presented in its human and natural-history context. Species included are:

- Arctic Wolf
- Mexican Wolf
- Coyote
- Red Wolf
- Rocky Mountain Wolf
- Great Plains Wolf

Graphics provide regional information that impacts each of these animals, providing a framework for in depth discussion. Featured topics include the most recent research and population statistics, while also including the human perspective on what it means to live with, or without, wolves.

Educational guidelines accompany the exhibition and International Wolf Center staff are available to assist in developing supplementary programming.

The International Wolf Center advances the survival of wolf populations by teaching about wolves, their relationship to wild lands, and the human role in their future. Located in Ely, Minnesota, the Center features a live wolf Exhibit Pack and an Interpretive Center where visitors can explore important issues involving wolves.

Specifications

- 600 - 1,000 square feet
- Taxidermy mounts, reading rails
